

Cyber Security TIPS & TRICKS

Ransomware Attacks

Ransomware attacks and methods are on the increase. Stopping an attack may not always be possible, and paying the ransom may not get your data back. Your focus should instead be business continuity and recovery time. That means incident adequate response policies, event logging, and backups that are periodically tested for reliability.

This Cyber Tip was brought to you by the Cyber Security Subcommittee of the Primerus™ Quality Assurance Board and Featured Contributor Steven W. Tepler of Mandelbaum Barrett PC. We also welcome your tips, which can be submitted to Paige Neirman at pneirman@primerus.com for publication consideration.
